

# PASSWORD SAFE

Password Safe is a central digital vault where all employees can protect, manage and monitor sensitive corporate data such as passwords, (privileged) access and accounts.

## With Password Safe you can

- measurably increase your company's IT security
- implement secure company-wide password policies
- increase the security awareness of all employees
- provide an intuitive interface for non-IT employees to increase user acceptance
- automate access rights for each employee
- securely share passwords between employees
- permanently relieve the IT department, reduce helpdesk calls

## Password Safe Life Cycle

### PASSWORD DISCOVERY

Detect & close security holes

- Recognize new and insecure passwords and replace them with secure ones
- Automatic password resets

### PASSWORD MANAGEMENT

All access data secure & at a glance

- Create complex passwords in one click
- Login in seconds

### PASSWORD SHARING

Collaborate better across the enterprise

- Share passwords securely and easily with colleagues
- The password remains confidential thanks to data protection

### PASSWORD DOCUMENTATION

Perfect for audits

- All accesses are logged in an audit-proof manner
- Up to date due to report & dashboard

Thanks to Password Safe's numerous features, you can measurably increase your company's security. The user-friendly interface also guarantees a high level of acceptance, even among non-IT users. Thus, you relieve your IT department and facilitate easier workflows for your employees.

## Password Safe offers

- modern end-to-end encryption technologies
- particularly high data security and control thanks to self-hosting and no backdoors
- a trustworthy and legally compliant security solution „made in Germany“
- a role-based rights system that replicates even complex corporate structures in detail
- a highly secure IT security solution that undergoes regular pentests and updates
- audit-proof logging of all accesses
- reliable emergency management thanks to Emergency WebViewer

Password Safe can be connected to various tools and programs such as existing PAM or SIEM systems in order to fulfill company-specific security requirements. Extensions for two-factor authentication or login without password can also easily be implemented with Password Safe.
