

PASSWORD SAFE

IT Security in the Education Industry

The healthcare crisis has hit educational institutions harder than any other industry. IT departments had to enable online learning for thousands of students overnight, including creating, managing, and securing diverse accounts and credentials. Overload and uncertainty plagued not just IT departments, but also university staff, faculty, and students.

With the ever-increasing number of cyber-attacks, educational institutions have been continuously falling victim. Blackmail and ransomware are just some of the attacks used. Hacking or data breaches result in sensitive data such as names, grades, degrees, and certificates falling into the wrong hands.

Since knowledge is the most valuable asset at educational institutions, it becomes important to exercise special caution. When it comes to remote working as well as home-schooling during COVID-19, educational institutions must ensure secure access to their systems guaranteed by professional password management.

Save yourself time and money and work with the market leader in password management right from the start!

Intelligent and secure solutions for the education sector

Password Safe supports you with your customised password management. No matter whether you are dealing with branched authorisation structures for universities or central password management in other educational institutions: rely on our extensive experience and trusted expertise within the IT security industry!

Secure login for a secure future

At universities and colleges, there are several tools and systems with associated access data. Its administration costs the institutions time and effort. If users resort to insecure passwords or management methods to try and manage all those tools, the risk of cyber-attacks increases significantly.

Password Safe solves this problem. With the password management solution, users only need to remember one password. Password Safe takes care of everything else! This allows students, faculty, and internal staff to create a unique and complex password for each access, making cyber-attacks much more difficult.

Reduced burden on IT

Dealing with and navigating the internal password management structure can become a tedious task for staff and students. There can be long waits for a password request to be handled by the helpdesk when problems or questions arise. At the same time, IT departments spend valuable time performing administrative tasks and responding to helpdesk requests.

Password Safe simplifies the end-user experience, eliminating the need for constant contact with the IT department, unnecessary wait times, and costs. For example, internal employees and learners can independently change and reset passwords, reducing the workload on IT.

Prepared for emergencies

When a server failure occurs, students are unable to access the university platform, register for exams, view grades, or download course materials. Access to online teaching is also lost in this case.

Password Safe offers a secure solution in case of an emergency. Along with the OfflineClient, the Emergency WebViewer also generates automatic backups - even in cases of server failure. The access data remains secured.

Easy Onboarding

Every year there are new students, pupils, or teachers who need new accesses and passwords. Managing and controlling these credentials manually takes a lot of time and effort and can become confusing. Students of a certain discipline or faculty also need access to the same tools, and manual authorisation is very time-consuming.

Password Safe offers role-based rights to serve this purpose. Roles and designated rights can be created according to, for example, school classes, courses of study, or faculties. After that, permissions on the accesses are assigned. Specific roles then automatically have access to previously defined accounts, making regular onboarding easy for IT.

Visibility on authorization management

Even in universities and colleges, the trend is moving from hierarchical structures towards teams, groups, and faculties. In daily collaboration, accounts are now also shared with others. Working and securely sharing passwords across faculties and locations is often difficult and vague.

Password Safe's integrated permission management allows IT to grant and revoke permissions to individual instructors, teachers, and other responsible parties. In addition, users can collaborate efficiently in flexible teams and workgroups and share their passwords without plain text. For example, professors can provide their students with access data independently and authorize them to use login data and hidden passwords flexibly over time.

Password Safe ensures secure management and handling of access data regardless of the size of the educational institution and the associated number of licenses.

The user-friendly interface, also available in German, leads to an easy operation of the software, even for end users without experience. Password Safe's easily downloadable browser extension can be added to all popular browsers, ensuring efficiency and convenience for all users regardless of their operating system.

right solution for you!**

Why Password Safe?

Experience

MATESO has focused on professional enterprise password management since **2006**. Over **21 of the top 40 DAX companies** and more than **10,000 users** already rely on Password Safe for password protection.

Comprehensive protection

With the influence of over **20 years of market experience**, the solution is holistically tailored to the individual security requirements and needs of companies. All passwords are protected holistically throughout the **password lifecycle** - from creation to archiving.

Made in Germany

As a member of the TeleTrust initiative „**IT-Security Made in Germany**“, MATESO stands for trustworthy IT security solutions that meet the requirements of German data protection law, can be used in **compliance with the DSGVO** and do not contain any hidden accesses.
