PASSWORD SAFE

PASSWORD SAFE IN PRACTICE
THE COMPANY-WIDE SOLUTION FOR EVERY EMPLOYEE

Today, employees have to remember numerous passwords. Post-its, excel lists stored on the server and insecure passwords are commonplace. Above all, the countless service accounts that are „secured" by bad passwords represent a major security risk for the entire company.

> **Security must be top priority for every employee and the entire company.**

The LightClient

The simple solution for end users: clear user interface and essential functions for immediate use across departments

High Availability

Thanks to multi-tier architecture: High availability via database clustering and load balancing of application servers is possible at any time
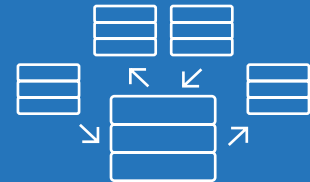

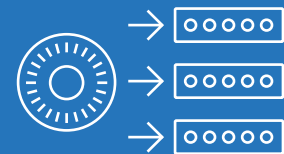

Auditing & Reporting

Effective analyses and evaluations: Daily automated reports including filter system

Single sign-on

Access websites and applications with only one click - even possible without password! Comfortable and simple: The SSO Agent communicates with our add-ons - also without main application

Password Safe relieves your employees and protects your systems automatically. The integrated rights management ensures that employees can only access the data for which they are authorised. The automatic password reset not only generates highly encrypted passwords but also resets them again and again.

With the LightClient, even employees without prior knowledge or training can use Password Safe quickly and easily.

Password Safe is also highly scalable and can be operated on several application servers and database clusters: In the event of hardware failure, a backup system takes over to ensure data recovery.
